SPIDER Ag

A Simple Guide to Recording and Managing Your Farm

SPIDER Ag helps farmers keep all farm information in one place. You can record voice notes, upload photos and documents, organize farm layouts, track tasks, and create reports for farm management and organic certification.

Using SPIDER Ag regularly helps you:

- Keep better farm records
- Reduce paperwork
- Track farm work and decisions
- Prepare reports quickly when needed
- Work offline and sync up later

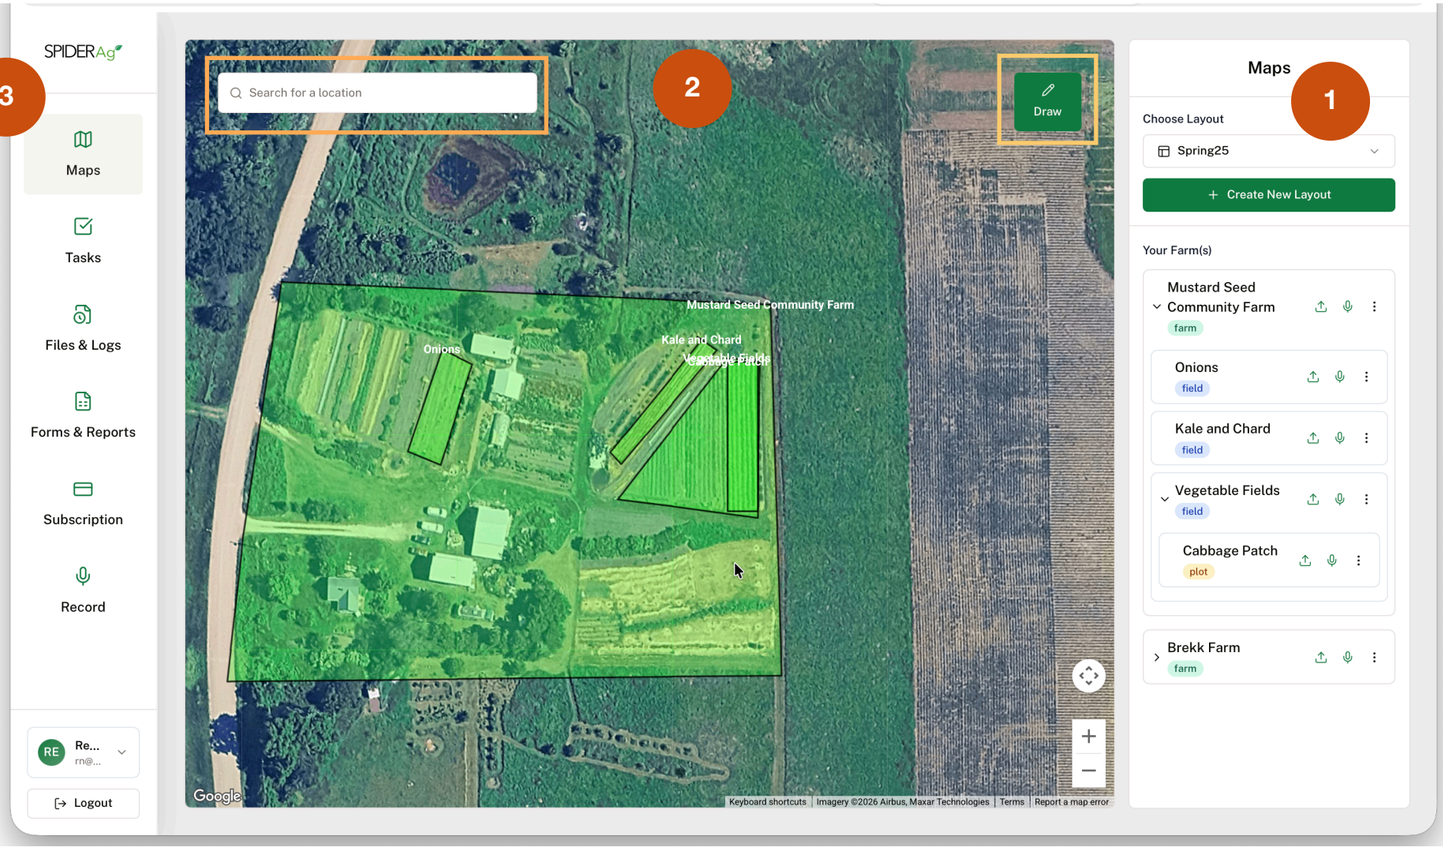
Understanding the Home Screen



When you log in, you will see three main areas

1. Seasonal Layout Panel

Here you can:

- Create your farm layouts by seasons or as to your preference. You can create multiple layouts for different seasons or years. Example: 2026 Spring, 2026 Fall
- Organize your farms into fields, plots, and sub plots
- Record farm activities
- Upload documents, photos, and voice notes

2. Farm Map

The farm map helps you locate and plan your farm.

Features include:

- **Search Tool:** Find your farm using your address.
- **Draw Tool:** Create boundaries and land areas on the map.

Drawing tools include:

- Point-to-Point drawing (precise boundaries)
- Freehand drawing (irregular areas)
- Rectangle tool (rectangular fields)
- Circle tool (circular areas)

3. Left Menu

Maps - View all seasonal layouts and farm maps.

Tasks - Track farm work such as irrigation, planting, or harvesting. Set task status as Pending, In Progress, Completed

Files & Logs - Store farm data - photos, documents, voice recordings. You can search, sort, and filter your files.

Forms & Reports - Create custom reports or reports for organic certification

Subscription - Manage your subscription plan. You may renew or cancel your plan at any time.

Record - Record voice notes in the field. SPIDER Ag automatically converts speech to text and uses it to create tasks and reports.

Setting Up Your Farm

There are four steps to set up your farm before you start recording your farm activities.

1. Create a new seasonal layout

A seasonal layout acts like **a digital filing cabinet** for your farm records. You can store copies of:

- Documents and invoices
- Photos and notes
- Farm activity records

How to create a new layout

1. Select +Create New Layout
2. Enter a layout name.
   It is good practice to name layouts by season and year, e.g., 2026 Spring, 2026 Vegetable Season
3. Add a date range
4. Select Create

2. Locate your farm

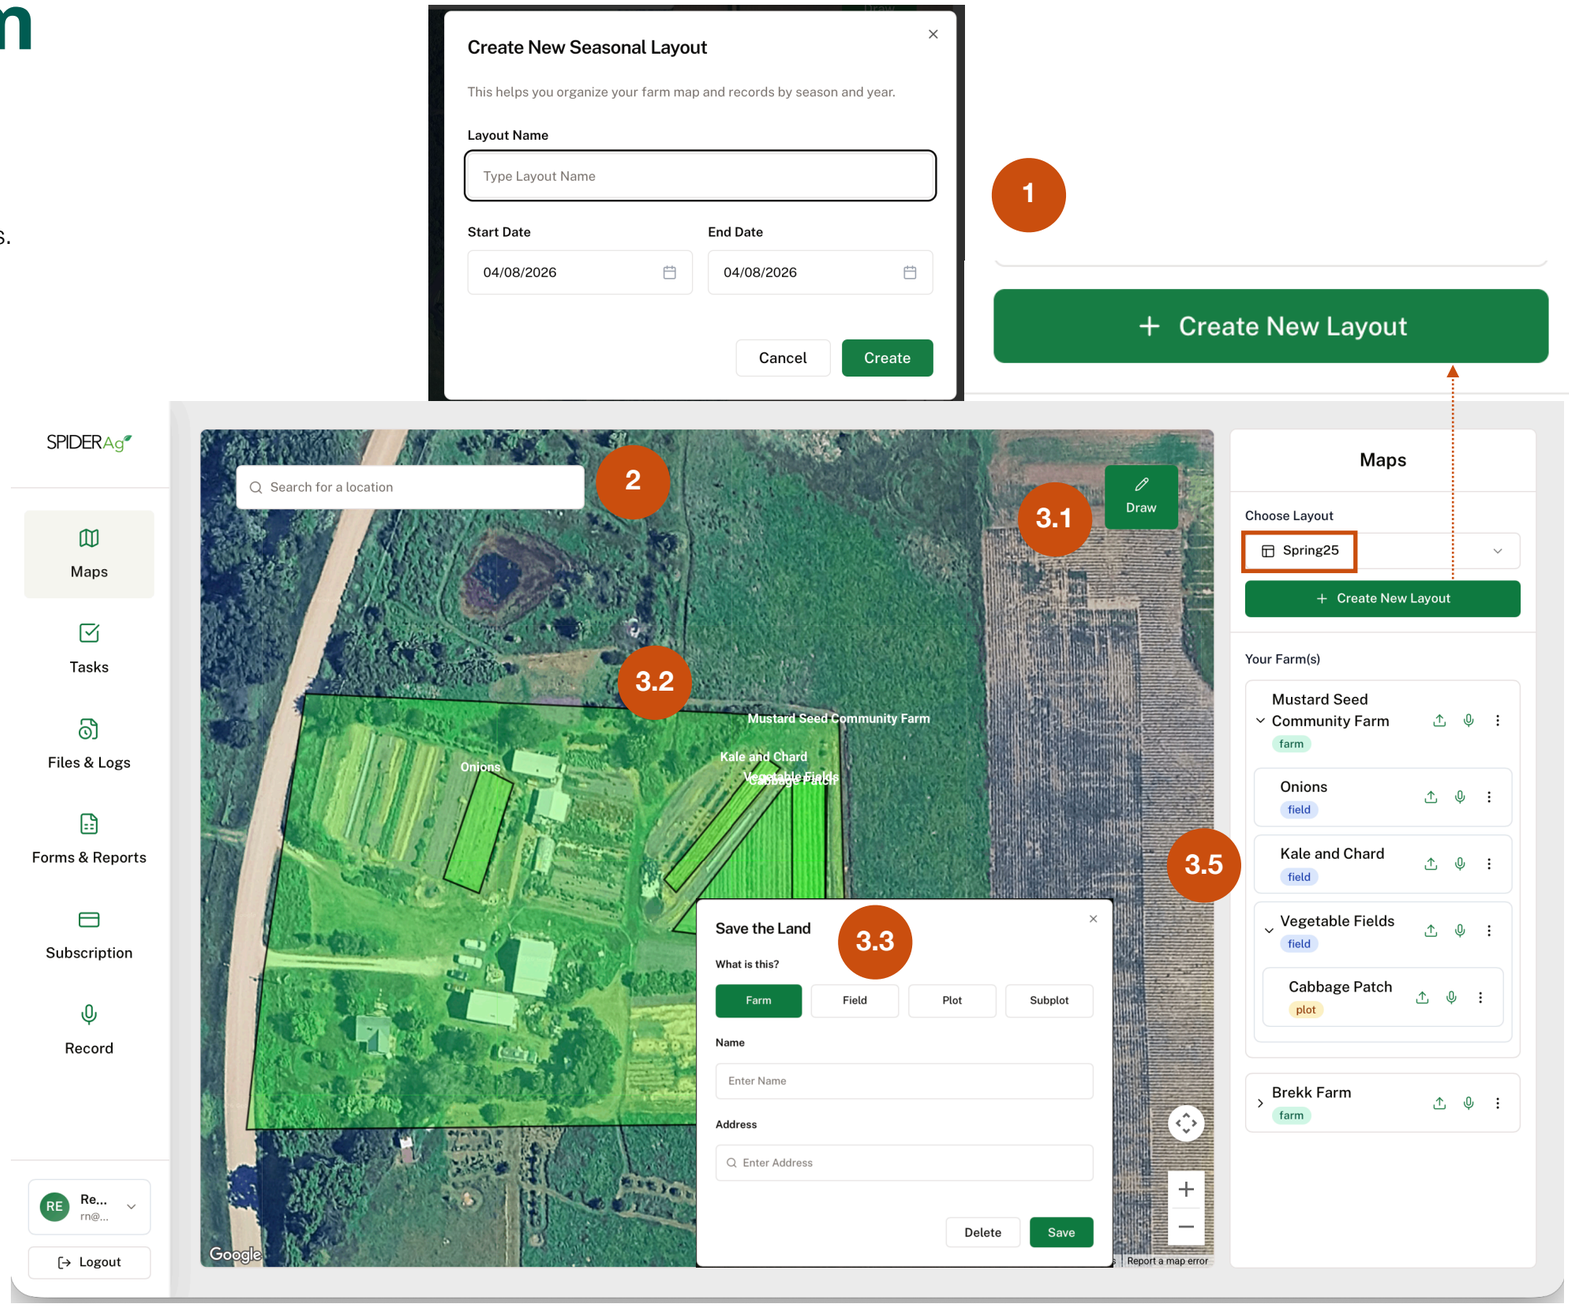
1. Enter your farm address in the Search box on the map
2. The map will zoom to your location

3. Draw your farm boundaries

1. Select Draw and choose a drawing tool
2. Draw your farm boundary.
3. Enter details about your farm in the pop up window.
4. Select the desired land tab (Farm, Field, Plot, or Subplot) to order your land area in the hierarchy below:

   Farm
   - Field
     - Plot
       - Subplot

5. Select Save. The land area is indented under Your Farms to indicate its order in the hierarchy.



Managing Farm Tasks

Tasks help track daily farm work. You can create new tasks and manage their status. Add tasks either by entering necessary information in the pop up window or by using SPIDER Ag''s Record feature to record your voice.

1. Create a task manually

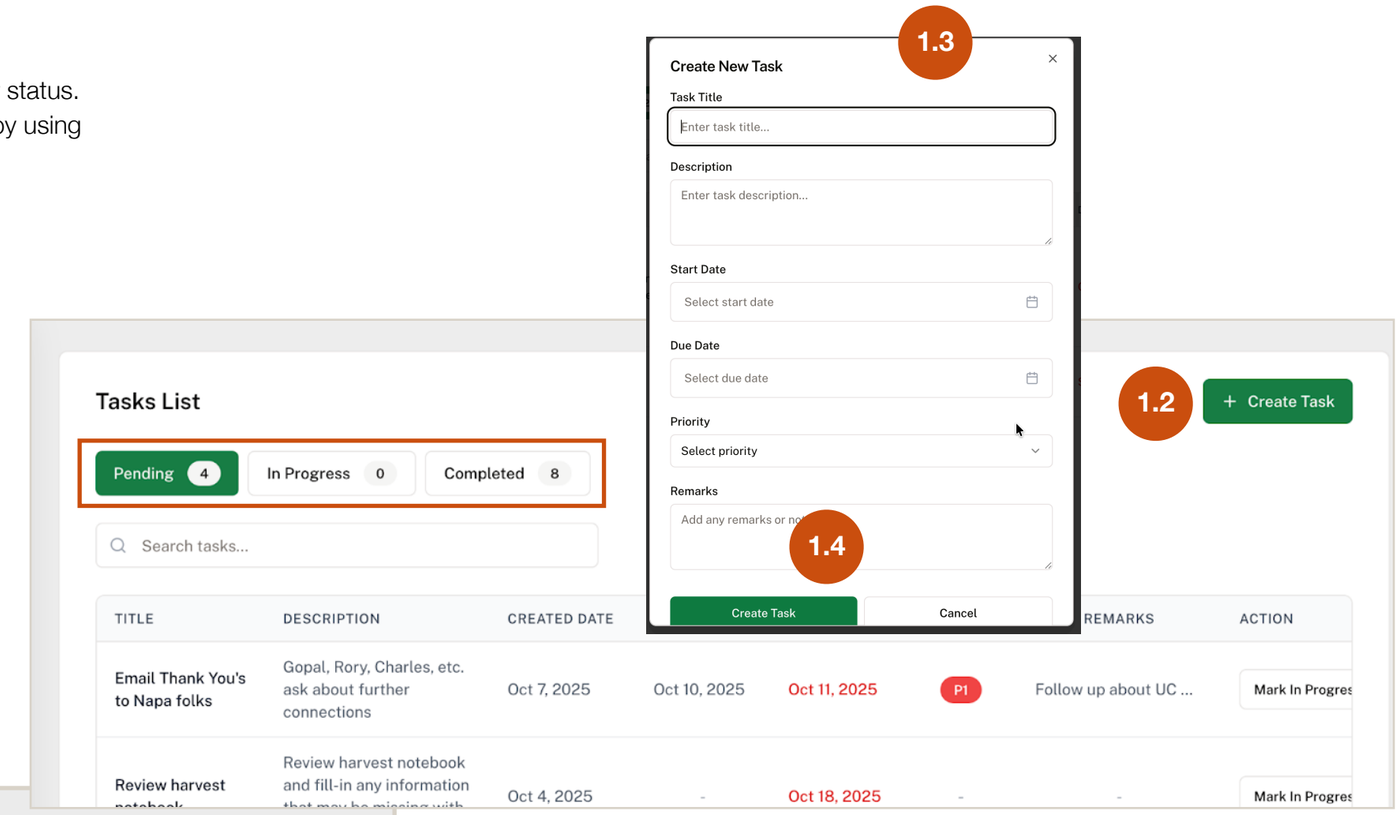
1. Select Task on the left menu
2. Select + Create Task
3. Enter details:Title, Description, Start date, Due date, Priority
4. Select Create Task button at the bottom

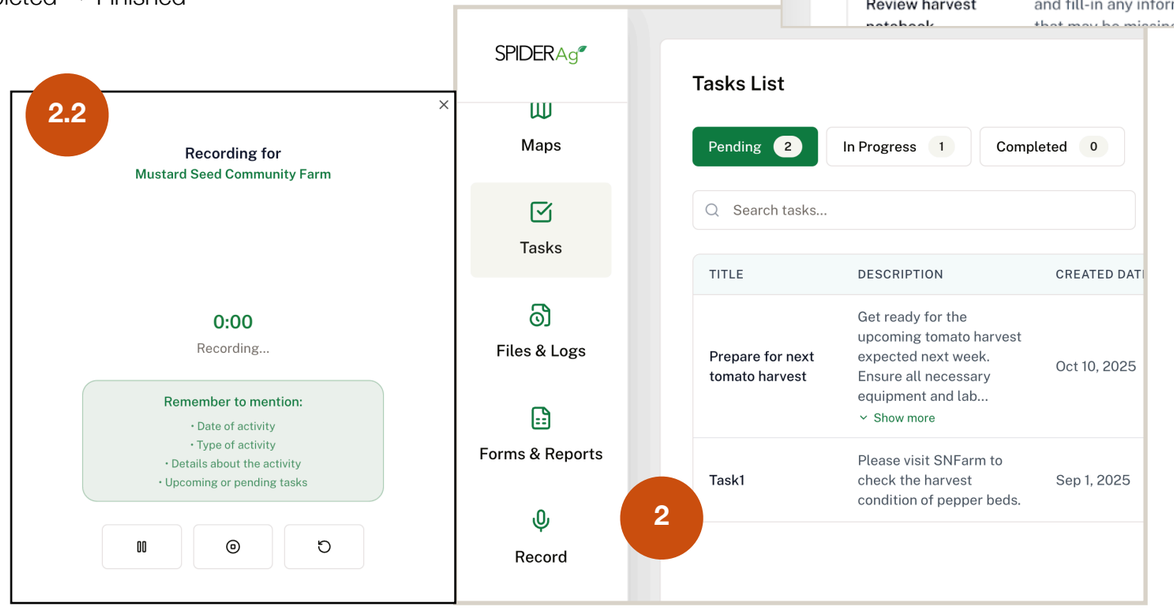
2. Create a task by recording

1. Go to Record on the left menu
2. Begin speaking about the required task(s). SPIDER Ag will listen and automatically generate a task list.
3. Review the list and make changes if needed

Task Status

- Pending → Not started
- In Progress → Work underway
- Completed → Finished





Saving Farm Documents

Set up the seasonal layout and land areas, then collect and save data on your farm operations, including photos, voice notes, and documents.

How to upload files to SPIDER Ag

1. Go to your farm map
2. Select a field or land area
3. Select the Upload button next to the farm name
4. Choose Upload Files to save existing files on your computer
5. Locate and select desired file(s). You may upload a maximum of five files at a time.
6. Select Continue
7. You may also select Plain Text and type to create a new text file.

What SPIDER Ag does automatically

After uploading the file, SPIDER Ag will process it. It can:

- Transcribe scanned copies of text (PDF, Word), describe pictures
- Convert voice recordings to text
- Extract important information from files
- Suggest topics/tags associated with farming

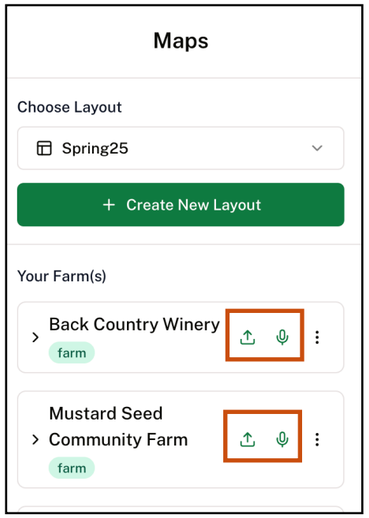
This saves time and reduces manual data entry. It allows you to organize your farm information however you prefer with minimal effort.

Review your data!

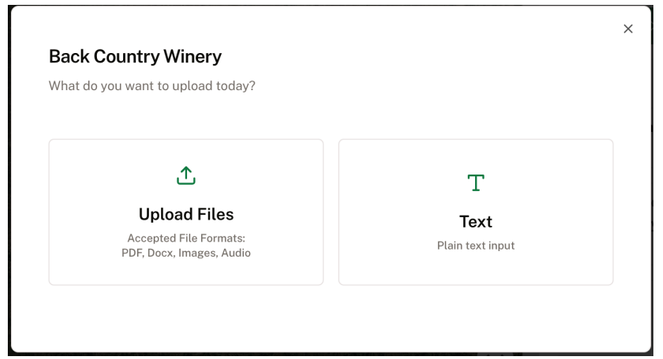
After SPIDER Ag has extracted and converted information into text, it's good practice to review the data and make changes if needed. Reviewing data helps you catch errors early, which improves SPIDER Ag's accuracy. You can:

- Add missing information
- Correct errors
- Add additional rows if needed

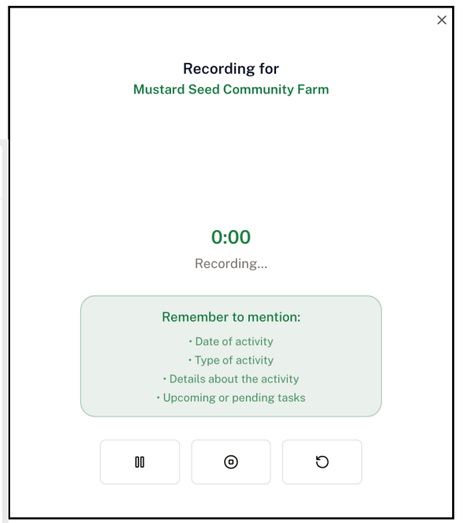
Once satisfied, confirm and save after reviewing and correcting.



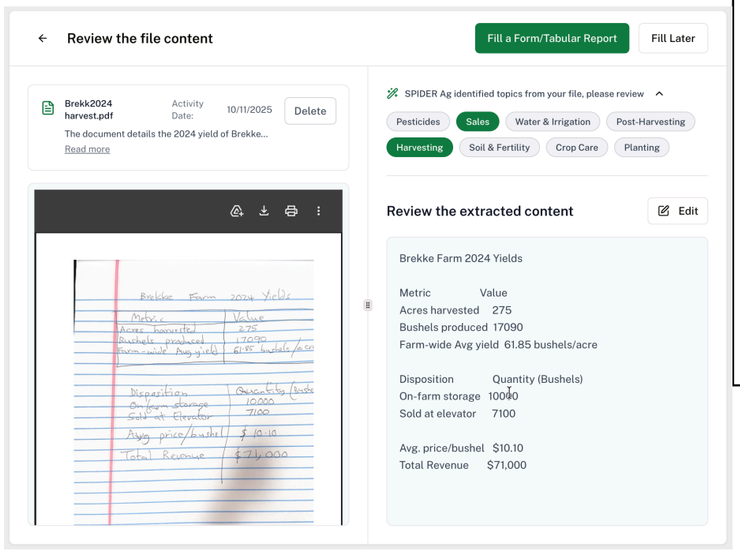
Select Upload or Record



Upload photos, documents or enter text to create a new file



Record voice notes



Scanned document

Using Files & Logs

Files & Logs is your main farm record center. Here you can (some functions listed below are under the (:) menu in the last column):

- Search files by keyword
- Filter by date, file type, layout, or land
- Download documents
- Rename files
- Edit topics/tags identified by SPIDER Ag
- Move/Assign files to their appropriate land area (farm, field, plot, or subplot)
- Delete files

Move/Assign files to land areas

Moving or assigning a file to the correct land area is important to retain accurate records. If a file is created without specifying to which land area it refers or it has been accidentally assigned to an incorrect land area, you can move it to the correct location.

If a file is not associated with a land area, you can establish the link in two ways:

1. Select the document under Files & Logs
   a. Select the three vertical dots (:) in the last column
   b. Select Move File
   c. Select the correct land area
   d. Click Confirm and Move
2. Alternatively, you can open the file and assign it to the desired land area. This ensures records are organized correctly

Creating Reports

Reports help organize farm data and support organic certification.

NOTE: You can generate reports from a single file or a maximum of five files. However, the files must be linked to a land area.

SPIDER Ag offers four different methods to generate a report.

1. Use an existing template based on USDA requirements for organic farmers. These are known as NOP (National Organic Program) forms.
2. Create a custom report using a report format you created earlier
3. Create a new report from scratch
4. Create a report from a single file

1. Create NOP reports

SPIDER Ag can generate reports used for organic certification. Examples include Planting records, Harvest logs, Seed records, and more.

1. Go to Forms & Reports on the left menu
2. Select Generate New Report
3. Select a NOP form from the drop down list
4. Select file(s) to generate the report
5. Review SPIDER Ag-filled form. Edit if needed
6. Click Confirm & Save
7. Save it with a custom name.
   It is good practice to include the date in the filename.
8. The new report will appear under Your Reports.

2. Create custom report from an existing report

- Follow Steps 1 and 2 under *Create NOP Reports*
- ✱ Under Select a custom template, click
  Select an existing report format from the drop down list
- Follow Steps 4-8 under *Create NOP Reports*

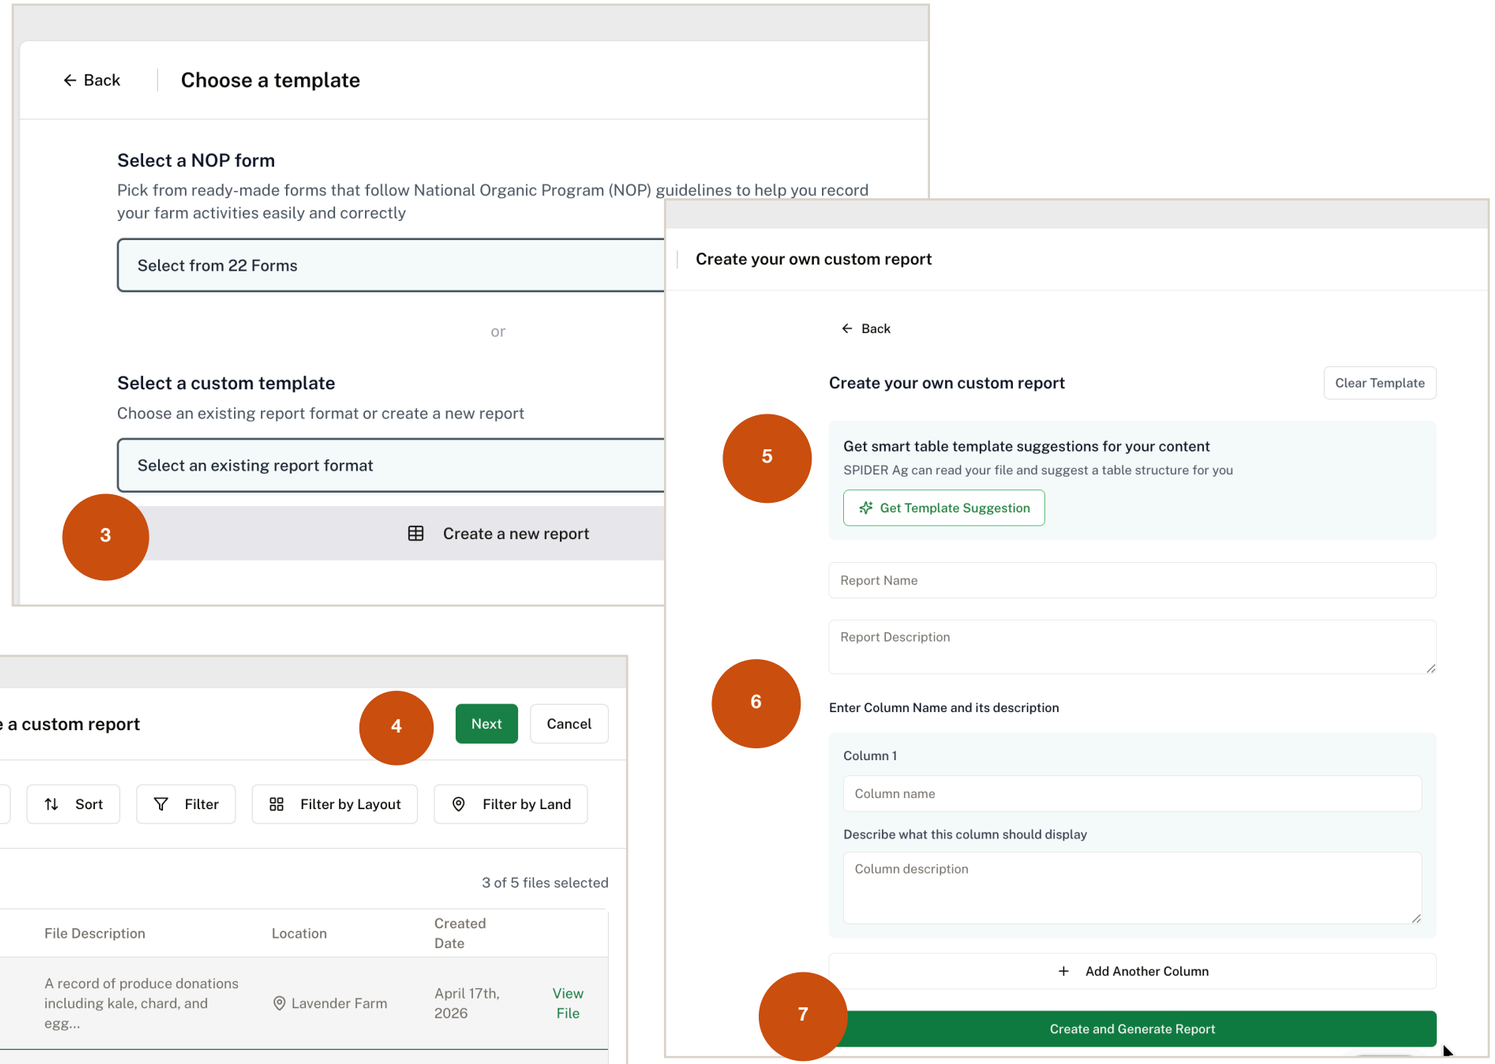
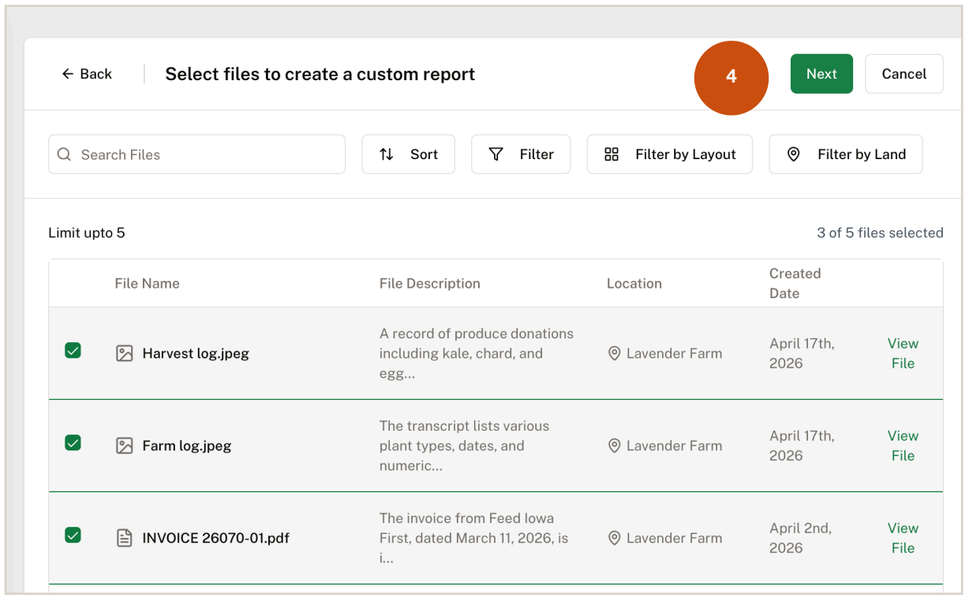
Creating Reports (Cont.)

3. Create a new report from scratch*

1. Go to Forms & Reports
2. Select Generate New Report
3. Select Create a new report
4. Select file(s) to generate the report and click Next
5. You may take SPIDER Ag's suggestion for a new template or create your own
6. Enter necessary information, such as:
   a. Report name and description
   b. Column name and description. You can add more columns as needed.
7. Select Create and Generate Report
8. Review SPIDER Ag-filled form
9. Edit if needed. You can add more rows at this point.
10. Click Confirm & Save
11. Save it with a custom name
12. The new report will appear under Your Reports

**screenshots for steps 1-2 and 8-10, refer to page 8*

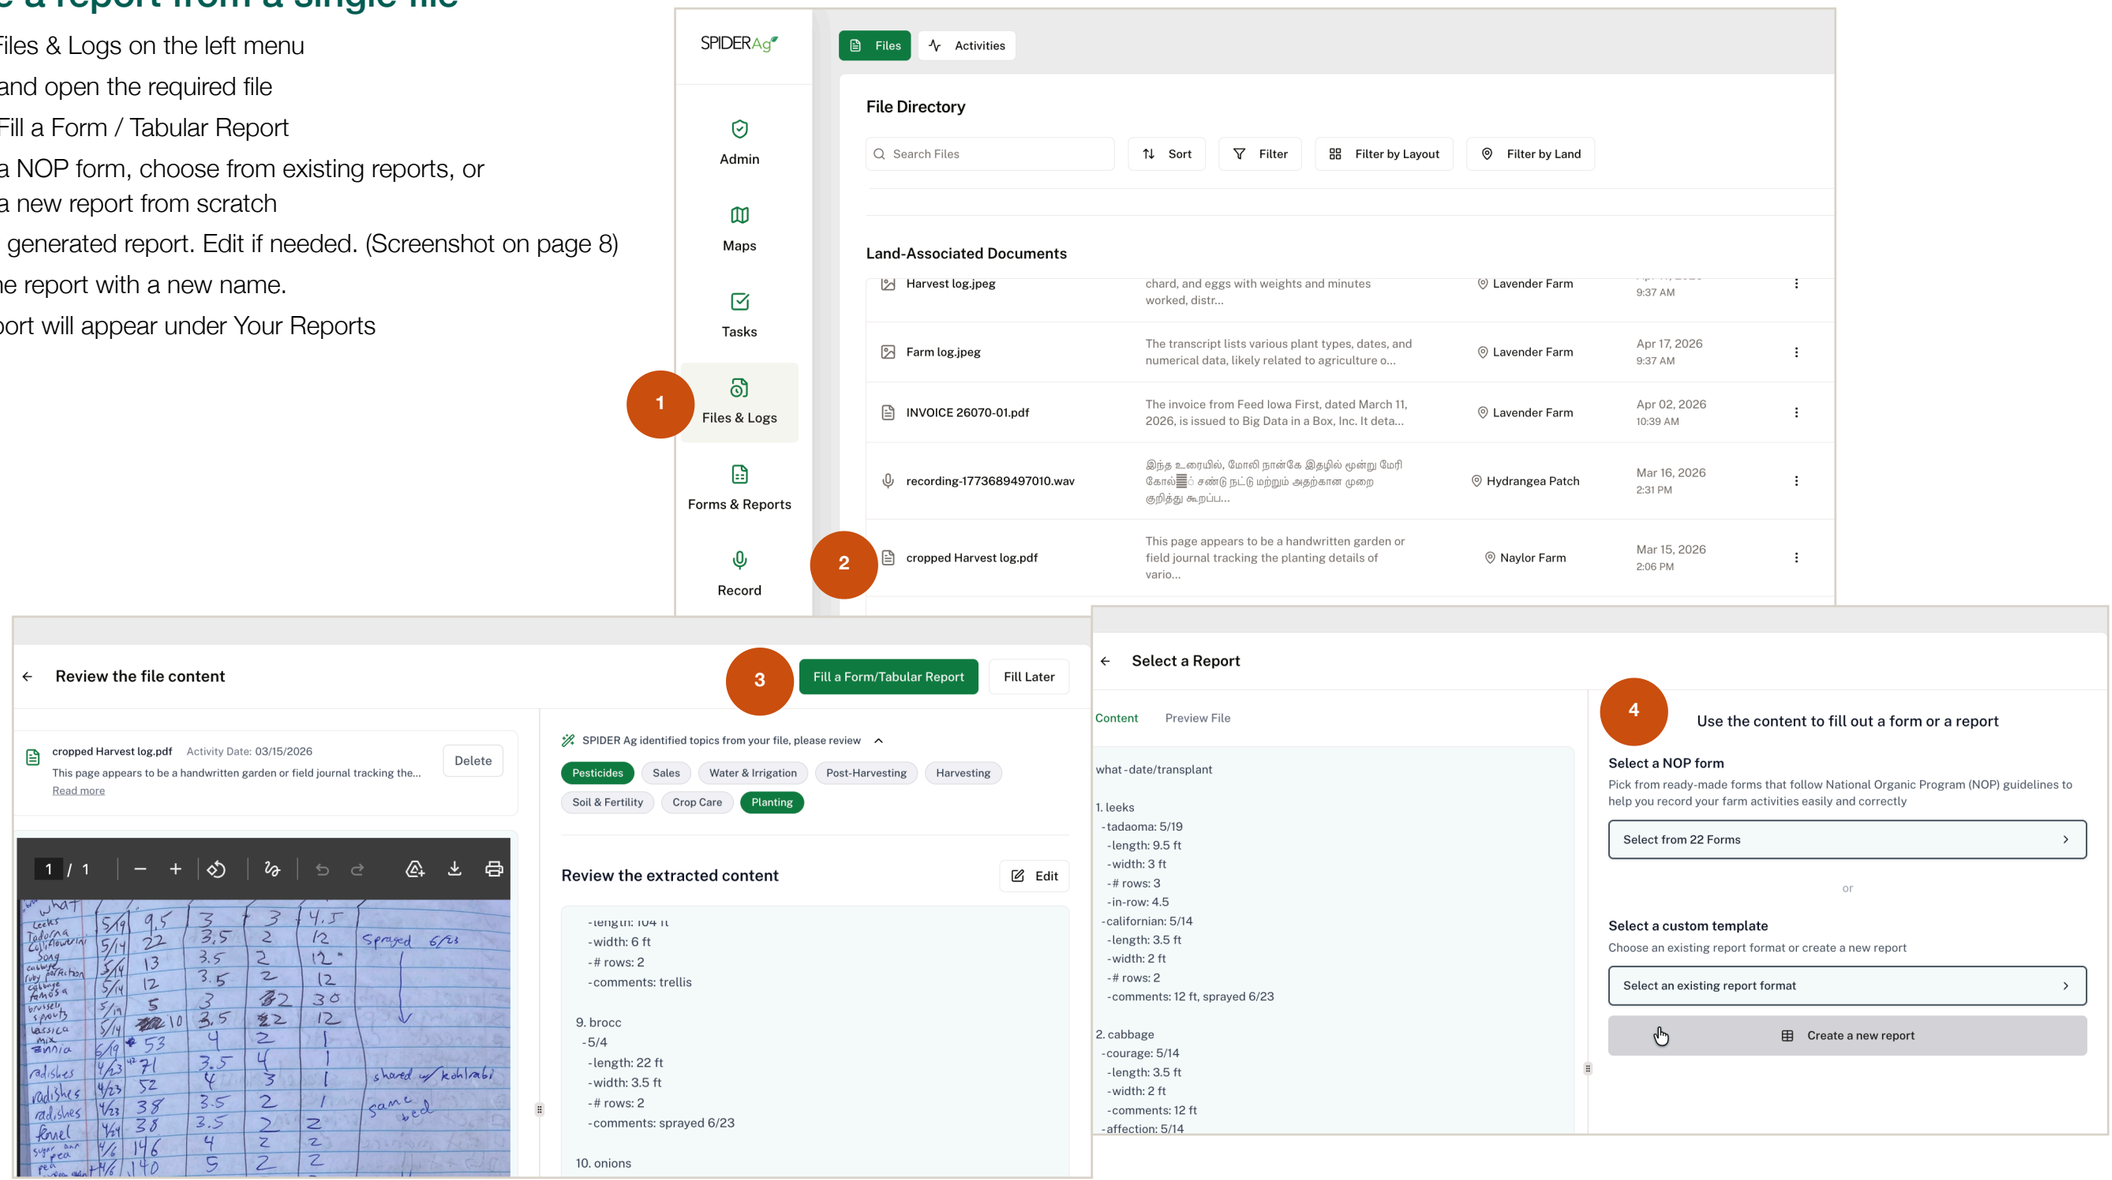




Creating Reports (Cont.)

4. Create a report from a single file

1. Go to Files & Logs on the left menu
2. Select and open the required file
3. Select Fill a Form / Tabular Report
4. Select a NOP form, choose from existing reports, or create a new report from scratch
5. Review generated report. Edit if needed. (Screenshot on page 8)
6. Save the report with a new name.
7. The report will appear under Your Reports

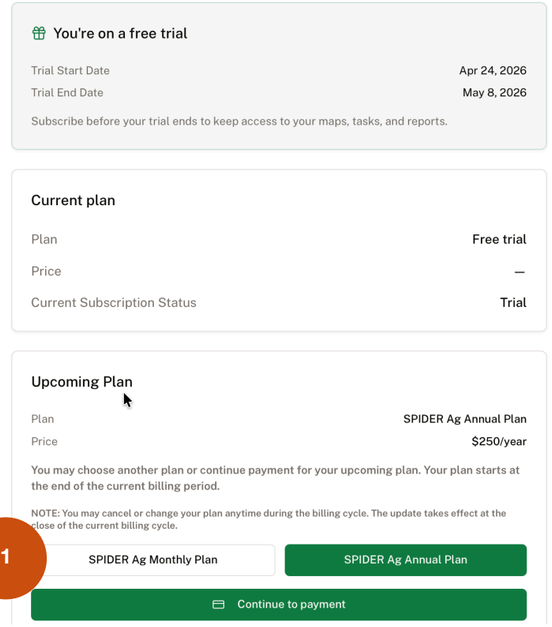


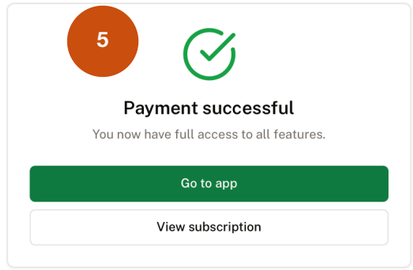
Managing Your Subscription

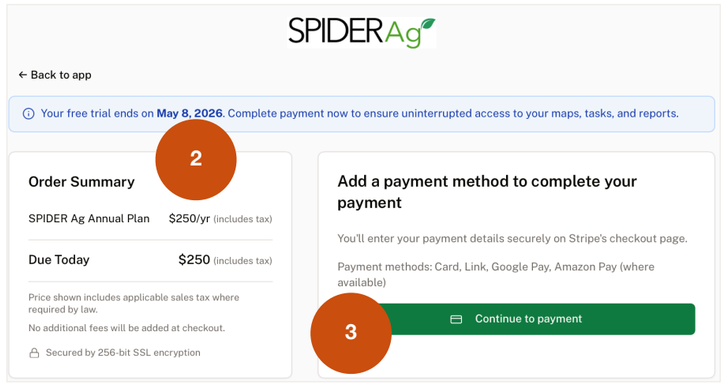
Your subscription comes with a 14-day free trial and full access to SPIDER Ag. However, in order to retain access to your data, you will need to pay for your subscription before your free trial ends.

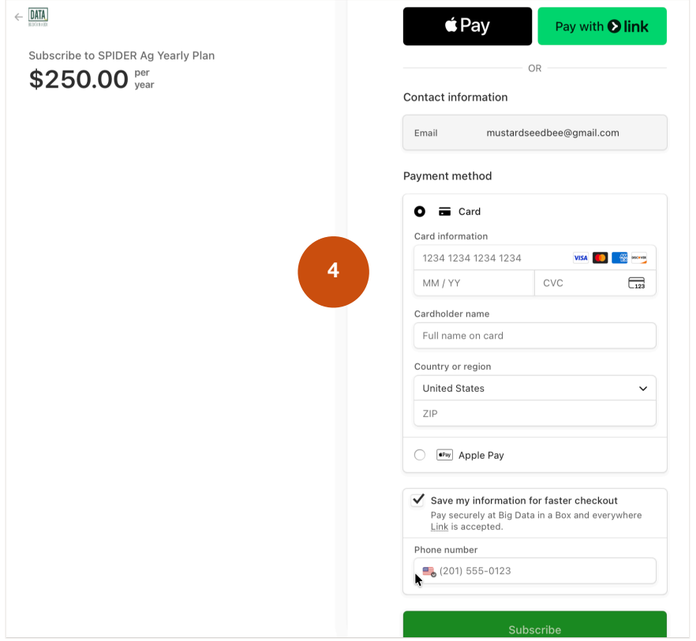
Making payment

1. Select Continue to payment on the Subscription page
2. Review Order Summary. Go back to make changes if needed.
3. Select Continue to payment.
4. Enter your credit card details and select Subscribe at the bottom.
5. SPIDER Ag indicates whether the payment was successful.









Managing Your Subscription (cont.)

Managing Your Subscription (Cont.)

6. Subscription page reflects the current and next billing period.
   NOTE: Your new billing period begins only after the free trial ends.
7. Select Download under Invoice history to download the invoice
8. Select Pay online link in the invoice to download receipt.

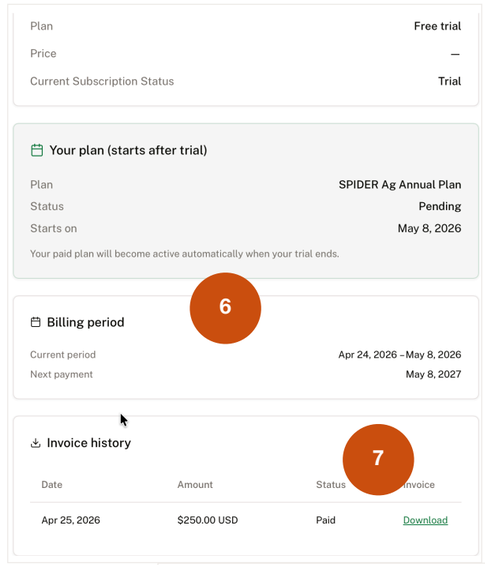
To wrap things up,

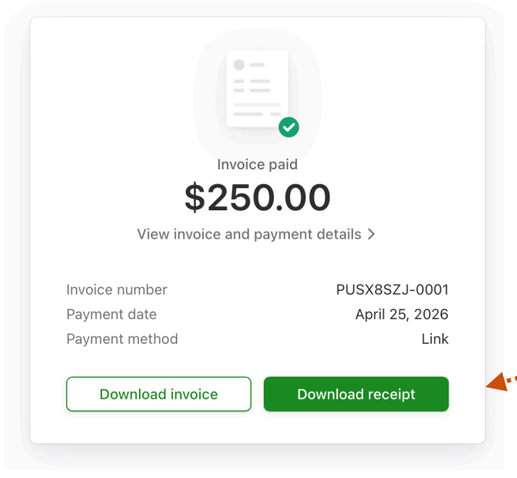
From the Subscription page you can:

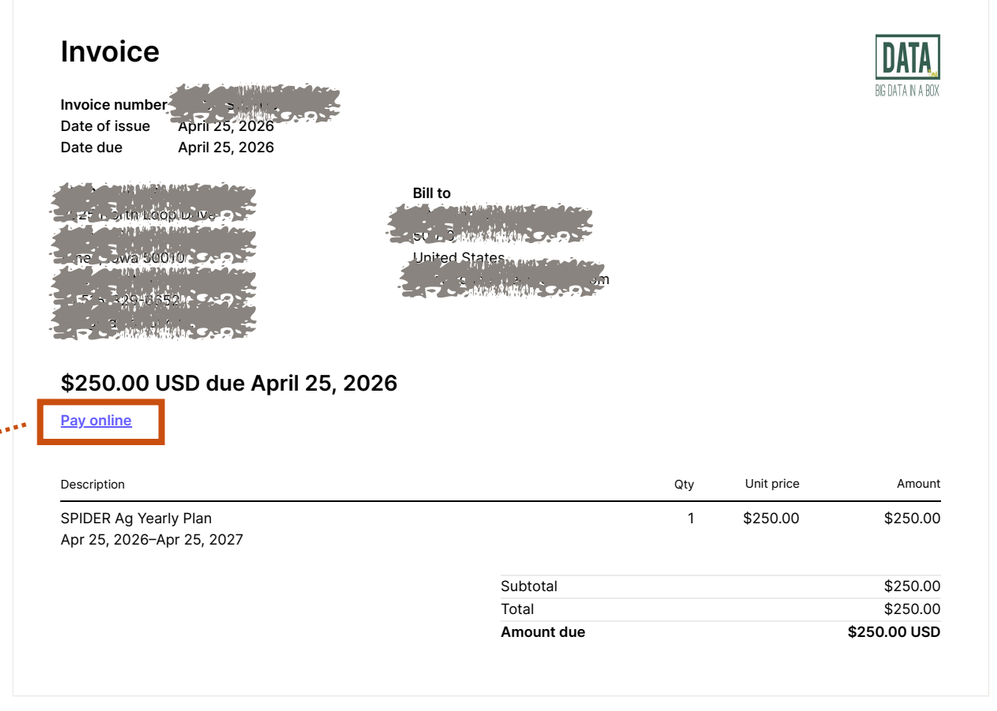
- Pay for your subscription before the free trial ends.
- Change your subscription plan (the new plan begins at the end of the current billing period).
- Cancel anytime (subscription remains active until the current billing period ends).

NOTE:

- You will lose access to your files and reports at the end of the billing cycle if you cancel.
- Download any files and reports you want to keep before the end of the billing cycle to avoid losing access to your data.







Additional Information

Best Practices

- **Naming files**
  - Include date and/or year in filenames and seasonal layouts, E.g., “Spring 2026 Planting Season”
- **Recording voice**
  - Provide details like time, place, and other important information when recording voice notes. This helps SPIDER Ag understand the data better.
  - Use the SPIDER Ag mobile app in the field to record voice notes and take pictures. It saves data offline and syncs it when connected.
- **Organize farm**
  - Tag your land areas accurately (Farm/Field/Plot/Subplot) when creating them to avoid extra work. Changing their order requires deleting and recreating them, and relinking/assigning the correct files to the land area. This can become a major task with many documents.
- **Review SPIDER Ag work -** Always review SPIDER Ag’s output and make necessary corrections. This includes:
  - Transcriptions of
    - Voice recordings
    - Scanned images
    - PDFs and WORD files
  - Descriptions of pictures taken
  - Reports generated from selected files

Offline Use

You can use SPIDER Ag to a limited degree if you do not have Internet connection. You can:

- Record voice notes
- Capture photos
- Rename the recording and photos

Troubleshooting

Below are a few tips to solve issues that may crop up. If all else fails email **support@bdibsolutions.com**.

1. **Issue:** There is missing information in the transcription
   Solution: Edit the transcription
2. **Issue:** There is missing information in the report generated
   Solution: Ask SPIDER Ag to regenerate the report and review the result
3. **Issue:** Forgot to assign a file or assigned a file to the wrong land area
   Solution:
   a. Select Files & Logs on the left menu
   b. Locate and select the unassigned or wrongly assigned file in the File Directory
   c. Navigate to the three vertical dots (⋮) at the end of the row, click and select Move File in the drop down menu
   d. Choose the correct land area
   e. Select Confirm and Move
