Website messaging evaluation and change report

Date: November 3, 2026

Result and scope

The website now leads more consistently with time back, familiar farm record-keeping, audit preparation, and user review of AI output. The new taglines appear in relevant existing body sections. Organic and specialty growers see audit preparation and traceability; small and mid-sized row crop growers see operation fit and less added workload.

This review covered the homepage, SPIDER Ag product page, pricing page, contact page, interactive map copy, and shared contact modal. It includes 108 copy-change groups (112 text replacements), the correction of a misleading trial email form, a responsive pricing adjustment, and source-comment cleanup. The appendices record every tracked item.

No sections were added, removed, or reordered. All four main hero headings and every image source were preserved, including the photos added in the preceding requests. Supporting hero descriptions were corrected where they conflicted with the supplied claim guardrails; the new campaign taglines were placed in body sections. Prior photo and background work is excluded from this audit's change inventory.

The result is an assessment of the website's wording and the documented workflows, not independent certification of the product's accuracy, security, integrations, or commercial results. No deployment, live signup, purchase, form submission, or customer communication was performed.

Evaluation against the audience chart

Time savings

Priority from the supplied chart: Primary for both audiences

Before this revision: Strong individual time-saving statements, but interrupted by platform, equipment, and sensor language.

Current treatment: Leads, comparison, onboarding, benefits, mobile copy, and trial CTA emphasize less retyping and no second job. Existing qualitative time-back language is retained; no invented operational savings numbers are added.

Assessment: Aligned at the messaging level.

Compliance and audit readiness

Priority from the supplied chart: Primary for organic/specialty growers; secondary reporting simplicity for row crop growers

Before this revision: Some wording implied reports were already assembled without user action. FSA coverage and broad compliance wording exceeded the reviewed workflow evidence.

Current treatment: NOP preparation remains prominent. Copy explains selection, generation, review, correction, and confirmation. The FAQ and product CTA distinguish audit-ready records from the certifier's decision. General organization and reporting remain useful to row crop growers.

Assessment: Aligned, with product scope stated more accurately.

Trustworthy, reviewed AI

Priority from the supplied chart: Secondary for both audiences: control of records and confidence in data

Before this revision: Review was mentioned, but claims that AI checked its own entries could suggest self-verification or automatic human review.

Current treatment: "Trustworthy AI, Not Blind AI" is supported by an explicit review-and-confirm process. AI drafts and extracts; the grower corrects and saves.

Assessment: Aligned as a workflow promise, not a claim of error-free AI.

Fits your operation and ecosystem

Priority from the supplied chart: Secondary for organic/specialty growers; primary for smaller row crop operations

Before this revision: The farm/field/plot structure was visible, but named platform integrations and sensor claims distracted from practical fit.

Current treatment: "Farmer-Native Organization" is immediately explained using farm, field, plot, and subplot names and boundaries. Small/mid-sized operation fit and no dedicated data team remain prominent.

Assessment: Aligned for growers. Broader ecosystem compatibility is not claimed without evidence.

Market opportunity and traction

Priority from the supplied chart: Low for both audiences

Before this revision: Industry-leader funding language and a "Trusted by Real Farmers" gallery could imply stronger validation than the shown material established.

Current treatment: Institutional support is framed as "Research & Community Support." Illustrative farm photography is described as everyday farm work. Investor/market-size messages are not added.

Assessment: Appropriately secondary; proof-dependent claims remain open.

The website remains one shared grower experience. Audience priorities were woven into its existing sections, with practical organization and workflow fit explained for growers.

Use of the supplied taglines

Built for the field, not the office

How it is used: Used directly as "Built for the Field, Not the Office."

Where: Mobile sections on both the homepage and SPIDER Ag page.

Trustworthy AI, not blind AI

How it is used: Used directly, followed by the specific review-and-confirm step.

Where: Homepage AI benefit card; reinforced in capture descriptions, pricing features, FAQ, and product audit CTA.

Third-party validation

How it is used: Not published as an established fact. Support relationships are distinguished from independent product validation.

Where: Existing logo area renamed "Research & Community Support"; evidence needed before claiming external validation.

AI-driven, low-friction capture

How it is used: Expressed as “Say It, Snap It, It's Recorded,” “Say It: Voice Notes to Tasks,” and “Snap It: Paper Logs to Tables.” AI is described in the supporting copy.

Where: Homepage comparison and onboarding; SPIDER Ag capture cards and interface tour.

Farmer-native organization

How it is used: Used directly and explained in ordinary farm terms.

Where: Homepage organization benefit and SPIDER Ag organization feature.

Audit-ready compliance focus

How it is used: Expressed as “Audit-Ready Reporting,” “Audit-Ready Records, Reviewed by You,” and “Audit Preparation.”

Where: Benefit cards, report steps, map insight, pricing features, FAQ, and product CTA.

The wording “AI-driven” was deliberately kept out of lead headlines because the supplied chart says to lead with the benefit. “Third-party validation” was deliberately not asserted without a named assessment, scope, and result. Both choices follow the supplied guardrails while preserving the intended marketing direction.

Claim and phrasing evaluation

Prefer audit-ready records over guaranteed compliance

Action taken: Removed broad compliance-ready plan language and revised report promises. Added the certifier-decision distinction in existing explanatory copy.

Result / limit: The software is positioned as preparation support, not a certification guarantee. The historical founder quotation remains unchanged.

Lead with the benefit, not AI-powered language

Action taken: Replaced dense product introduction language with notes, photos, farm records, and less retyping.

Result / limit: AI remains visible where its role is useful to understand.

Avoid dense technical jargon up front

Action taken: Removed “secure, innovative, two-sided platform,” “Ag-Tech Standard,” and integration-led benefit framing.

Result / limit: Founding history and biographies remain historical material rather than product feature claims.

Avoid fully automated or hands-off promises

Action taken: Replaced passive “already assembled” report claims with create, select, review, and confirm steps.

Result / limit: “Recorded” does not mean approved or guaranteed accurate; nearby copy explains review.

Do not invent savings figures

Action taken: Added no numeric time, yield, profit, or ROI claims. Retained the existing price comparison and gave its basis beside the price.

Result / limit: $40 × 12 = $480; $480 - $250 = $230; $230 ÷ $480 = 47.9167%, rounded to the existing 48% badge. This is a billing comparison, not measured operational savings.

Avoid absolute data-safety or availability claims

Action taken: Removed “100% Private & Secure,” unverified encryption wording, and the blanket “accessible anywhere” storage claim.

Result / limit: The audit does not verify the actual security implementation or data retention policy.

Do not imply unsupported multi-user roles

Action taken: Removed product introduction language that suggested a two-sided supply-chain platform connecting farmers, certifiers, and regulators.

Result / limit: No role, team-account, permission, or certifier-login feature is newly claimed.

Do not overpromise named integrations

Action taken: Removed Operations Center and AgFiniti claims and direct sensor/equipment integration language from the revised written copy and map descriptions.

Result / limit: Existing illustrations and interface screenshots were preserved and are not treated as proof that integrations exist.

Keep low-friction capture grounded

Action taken: Used voice notes and photo capture, then review, correction, and confirmation.

Result / limit: The copy does not promise perfect extraction from every photograph or handwriting sample.

Keep offline claims scoped

Action taken: Pricing and product copy specify voice and photo capture offline and later synchronization.

Result / limit: Full report generation, AI processing, and all application features are not represented as available offline.

Treat third-party validation as evidence-dependent

Action taken: Replaced a broad funding/industry-leader heading and an unsupported trust implication in the photo gallery.

Result / limit: Logo relationships, customer use, and independent testing have not been independently authenticated in this task.

Page-by-page changes

Homepage

- Changed search metadata to farm records and audit preparation, with time savings and review in the description.
- Corrected the hero's supporting paragraph to remove unverified combine/sensor integrations. The main hero headline and imagery remain intact.
- Kept the main “one farm record” message and made organic audit preparation visible earlier.
- Updated all relevant map pins, mobile buttons, initial card text, and JavaScript descriptions together. The map now explains traceability, organization, field context, observations, and audit preparation rather than implying verified profitability analysis or direct equipment/sensor connectivity.
- Replaced the gallery's implied customer-validation heading with “Built for Everyday Farm Work,” explicitly including organic, specialty, and row crop growers.

- Used “Say It, Snap It, It's Recorded” for the comparison, with nearby AI draft/review language. Reframed comparison rows as record storage, organic audit preparation, and farm organization.
- Used “Built for the Field, Not the Office” for the mobile section.
- Reframed the logo area as research/community support, rather than blanket funding or validation.
- Revised onboarding to make capture, review, confirmation, and report generation visible.
- Rebalanced the four benefit cards around audit-ready reporting, farmer-native organization, reviewed AI, and less paperwork.
- Updated FAQ answers for extraction/review, NOP report creation, trial/cancellation access, and control over AI-generated output.
- Replaced the local-only email form and invitation-sent toast with “Choose Your Plan,” linked to the existing pricing page.

SPIDER Ag page

- Replaced the platform-heavy hero description with a practical explanation of farm records. The “SPIDER Ag: Your Field Companion” heading and faded background image remain intact.
- Used “One Place for Every Farm Record” for the core record card.
- Changed capture titles to “Say It: Voice Notes to Tasks” and “Snap It: Paper Logs to Tables,” supported by review/correction/confirmation language.
- Used “Farmer-Native Organization” and explained the land hierarchy. Removed the absolute promise that the farmer would never need to reorganize anything; the manual warns that changing the hierarchy later can require recreating areas and relinking files.
- Used “Works in the Field, Even Offline” and limited offline description to the documented capture workflow.
- Used “Built for the Field, Not the Office” for the mobile section.
- Shifted interface-tour language toward less paperwork and explicit capture/review steps. Replaced compliance/analytics titles that overstated scope.
- Replaced the final passive report promise with “Audit-Ready Records, Reviewed by You” and an explicit user-initiated workflow. Stated that the certifier makes the certification decision.
- Removed “Instant Setup” and unqualified “Cancel Anytime” from the trial footnote. Changed “Create Free Account & Join” to “Choose a Plan & Start Trial” to match the next step.

Pricing page

- Replaced the security/compliance metadata with concrete record, capture, and audit-preparation benefits.
- Clarified that continued access after the trial requires a paid plan.
- Changed “Ag-Tech Standard” to “Fits Your Farm.”
- Removed unsupported popularity language and made the annual-versus-monthly savings comparison explicit in both the initial HTML and the billing-toggle code.
- Rewrote the five existing feature rows around less retyping, offline capture, farm organization, dated records/NOP templates, and review-and-confirm AI.
- Replaced the blanket security feature claim.
- Corrected a pre-existing mobile width problem that clipped the pricing card, heading, and billing toggle. Both monthly and annual options remain functional, with the same displayed amounts and signup URLs.

Contact page and shared contact modal

- Invited visitors to describe how they keep records today and ask about capture, organization, and audit preparation.
- Kept the existing form destination and behavior. No messages or test submissions were sent.

Evidence used and limitations

The four supplied images were the source of the messaging and audience rules: the preferred/avoided phrasing chart, the audience-priority matrix, the grower positioning statement, and the value propositions.

The local SPIDER Ag user manual was used as an additional product-scope reference:

- Pages 4 and 7: land areas and assigning records to farm/field/plot/subplot.
- Page 5: voice-generated task lists followed by user review and edits.
- Page 6: extraction from documents and images, followed by review, correction, confirmation, and saving.
- Pages 8-10: NOP/custom reports generated from selected, land-linked files; up to five files; review before saving.
- Pages 11-12: 14-day trial, paid access after the trial, access through the current billing period after cancellation, and downloading needed files/reports before access ends.
- Page 13: offline recording/photos/renaming, later sync, and cautions about altering land hierarchies.

The existing displayed $250/year and $40/month prices supplied the plan-savings arithmetic. Prices were preserved, not independently re-priced or checked against a live payment provider. Existing “no credit card required” trial messaging was retained from the site; the live signup conditions were not independently tested.

No independent AI accuracy study, certifier acceptance statement, security assessment, named integration documentation, quantified time-savings study, or authenticated customer testimonial was supplied or established by this review. Those claims were not invented to fill the gaps.

Remaining findings and evidence needs

1. **Independent validation remains unproven in the reviewed material.** A publishable claim needs the evaluator's name, what was evaluated, the method/date, the result, and permission to cite it. Institutional support and partner logos are different forms of evidence.
2. **Support/logo relationships need a relationship-by-relationship check before stronger wording.** The images and links were preserved; the heading no longer says every organization funded or validated the product.
3. **Measured operating savings remain an evidence opportunity.** A defensible before/after example or study could support an hours-saved claim later. No number was added now.
4. **The existing map and product images are illustrative.** Written claims were corrected, but those graphics were not redesigned or independently authenticated as current product screenshots. Review them before treating them as evidence of sensor connectivity, financial analysis, or integrations.
5. **Secondary-page demo navigation is still a separate functional issue.** “Schedule Demo” uses a javascript:void(0) placeholder in the SPIDER Ag, pricing, and contact-page navigation. These were noted during the audit; the changes here did not alter those navigation destinations or perform a booking.
6. **Live product behavior remains outside this verification.** The audit used the local manual and website source, not an authenticated product session. Report creation, extraction quality, security, full export behavior, cancellation, and checkout should be confirmed against the deployed product before making stronger promises.

Validation performed

- Production build: passed with npm run build.
- JavaScript syntax check: passed with node --check main.js.
- Diff whitespace check: passed with git diff --check; Git only noted the existing LF/CRLF normalization warnings.
- Structural comparison with the pre-audit checkpoint: homepage 14 sections; SPIDER Ag 6; pricing 1; contact 1. All section tags/order, four main hero headings, and image src/srcset values were preserved.
- Homepage desktop/mobile review: all eight expandable card paragraphs fit within their existing 160px expansion limit at the 375px browser setting; measured text heights ranged from 116px to 145px.
- Organic-report FAQ: opens and displays the selected-files, review/confirm, and certifier-decision wording.
- Trial CTA: “Choose Your Plan” navigates to the local pricing page.
- Pricing: monthly displays $40/month and the monthly signup URL; annual displays $250/year and the yearly signup URL. The comparison text updates with each option.
- Mobile pricing widths: page width equals viewport content width at both the 375px setting (360px content width) and 320px setting (305px content width), with no horizontal overflow.
- SPIDER Ag: revised capture/organization/offline titles and unchanged hero heading/photo load verified in the browser.
- Contact page: revised form introduction verified in the browser, without submitting the form.
- Interactive map: all five insights cycle through their revised titles and close correctly.

Appendix A - Complete copy change inventory

The before/after entries below describe this revision only. Repeated desktop/mobile or initial/toggle strings are identified by their labels and occurrence counts. Entity spelling and short source fragments are preserved where that makes the exact change clear.

index.html

1. Search metadata - Page title
index.html (line 7)

Before: Big Data in a Box | Ag-Tech Data & Certification Solutions

After: Big Data in a Box | Farm Records & Audit Preparation

Reason: Lead with farm records and preparation rather than a broad certification solution.

2. Search metadata - Description
index.html (line 8)

Before: One farm record, kept your way. SPIDER Ag turns voice notes, photos, and paper logs into records you review, ready for reporting and organic certification.

After: Less time on paperwork. Keep voice notes, photos, and paper logs organized by farm and field, review AI-generated entries, and prepare audit-ready records.

Reason: Lead with time savings and make human review explicit.

3. Hero - Supporting description
index.html (line 93)

Before: Record a voice note, snap a picture or video, integrate real-time observations with data from combines and sensors, and build an intelligent, stress-free farm support.

After: Record voice notes, photos, and documents as work happens. Keep field activity in one place, review the details, and prepare records for reporting.

Reason: Remove unverified machinery and sensor integration claims; preserve the hero heading.

4. Hero - Trial note
index.html (line 121)

Before: No credit card commitment · 14-Day Free Trial

After: No credit card required · 14-Day Free Trial

Reason: State the existing trial condition precisely.

5. SPIDER Ag introduction - Eyebrow
index.html (line 155)

Before: Proprietary Software

After: Farm Record-Keeping

Reason: Use a plain description instead of a technical ownership label.

6. SPIDER Ag introduction - Lead
index.html (line 157)

Before: One farm record, kept the way you already work and trusted by the people who need to see it. SPIDER Ag turns voice notes, photos, and paper logs into usable records for small and mid-sized row crop growers.

After: One farm record, kept the way you already work and trusted by the people who need to see it. Keep voice notes, photos, and paper logs together for everyday work and organic audit preparation.

Reason: Preserve the main message while making organic audit preparation visible earlier.

7. Interactive farm map - Intro
index.html (line 248)

Before: Explore how field notes, equipment data, and farm records come together for clearer decisions.

After: Explore how notes, photos, and dated records help you keep track of field work and prepare reports.

Reason: Describe documented record workflows without suggesting automatic equipment connectivity.

8. Interactive farm map - Cost insight button label
index.html (line 261)

Before: aria-label="Know What Each Field Truly Earns"

After: aria-label="Trace Records Back to Each Field"

Reason: Avoid implying a validated profitability calculation.

9. Interactive farm map - Cost insight pin text
index.html (line 262)

Before: Field Net Earnings

After: Field Records

Reason: Match the field-record benefit.

10. Interactive farm map - Organization button label
index.html (line 276)

Before: aria-label="Connect Your Farm Systems"

After: aria-label="Built Around Your Farm"

Reason: Replace system integration language with farm organization.

11. Interactive farm map - Organization pin text
index.html (line 277)

Before: Connected Systems

After: Farm Organization

Reason: Use plain organization language.

12. Interactive farm map - Observation button label
index.html (line 256)

Before: aria-label="Measure Real Field Conditions"

After: aria-label="Record What You See in the Field"

Reason: Avoid claiming sensor measurement capability.

13. Interactive farm map - Observation pin text
index.html (line 257)

Before: Real Field Conditions

After: Field Observations

Reason: Describe observation capture.

14. Interactive farm map - Report button label
index.html (line 271)

Before: aria-label="Make Better Decisions Faster"

After: aria-label="Prepare Audit-Ready Records"

Reason: Replace a broad outcome claim with a concrete reporting benefit.

15. Interactive farm map - Report pin text
index.html (line 272)

Before: Better Decisions Faster

After: Audit-Ready Records

Reason: Use the approved audit-ready wording.

16. Interactive farm map - Mobile cost button
index.html (line 284)

Before: Field net earnings

After: Field records

Reason: Match the desktop label.

17. Interactive farm map - Mobile organization button
index.html (line 285)

Before: Connected systems

After: Farm organization

Reason: Match the desktop label.

18. Interactive farm map - Mobile observation button
index.html (line 287)

Before: Field conditions

After: Field observations

Reason: Match the desktop label.

19. Interactive farm map - Mobile report button
index.html (line 288)

Before: Better decisions

After: Audit-ready records

Reason: Match the desktop label.

20. Interactive farm map - Default card category
index.html (line 262)

Before: Field Net Profitability

After: Field Records

Reason: Keep the initial HTML consistent with interactive copy.

21. Interactive farm map - Default card title
index.html (line 307)

Before: Know What Each Field Truly Earns

After: Trace Records Back to Each Field

Reason: Avoid an unverified profitability calculation.

22. Interactive farm map - Default card description
index.html (line 308)

Before: Keep crop performance, inputs, labor, and financial records linked to each field, so you can trace costs and understand what it earns.

After: Keep dated tasks, input records, and receipts linked to the field they belong to, so you can find the record behind each activity.

Reason: Focus on traceability instead of implied financial analysis.

23. Farmer photo gallery - Heading
index.html (line 360)

Before: Trusted by Real Farmers

After: Built for Everyday Farm Work

Reason: Do not use illustrative farm photos as evidence of customer validation.

24. Farmer photo gallery - Lead
index.html (line 361)

Before: Traceable records, reviewed by you and ready for the people who need them.

After: For organic, specialty, and row crop growers: less time retyping notes, more time in the field, and records kept your way.

Reason: Emphasize existing habits and qualitative time savings.

25. Comparison - Heading
index.html (line 456)

Before: Keep your habits. Save your time.

After: Say It, Snap It, It's Recorded

Reason: Place the approved low-friction capture tagline in an existing body section.

26. Comparison - Lead
index.html (line 457)

Before: Keep speaking, snapping photos, and using paper logs. SPIDER Ag turns them into organized records without the extra data entry.

After: AI helps turn voice notes, photos, and paper logs into draft records. Review and confirm the details before saving, without retyping the whole log.

Reason: Explain the AI role after the benefit and qualify capture with human review.

27. Comparison - Storage category (2 occurrences)
index.html (line 509)

Before: Security & Backups

After: Record Storage

Reason: Avoid framing the comparison as an unsupported security guarantee.

28. Comparison - Storage benefit
index.html (line 519)

Before: Secure, encrypted cloud storage; accessible anywhere

After: Cloud-backed records kept in one place

Reason: Remove unverified encryption and absolute availability claims.

29. Comparison - Audit category (2 occurrences)
index.html (line 526)

Before: FSA & Organic Audits

After: Organic Audit Preparation

Reason: Focus on the documented NOP workflow rather than unverified FSA coverage.

30. Comparison - Audit benefit
index.html (line 536)

Before: Dated records assembled into audit-ready NOP reports

After: NOP templates for reports you review and confirm

Reason: Make report creation and review explicit.

31. Comparison - Organization category (2 occurrences)
index.html (line 277)

Before: Actionable Insights

After: Farm Organization

Reason: Match the actual benefit stated in the comparison.

32. Mobile app - Heading
index.html (line 589)

Before: SPIDER Ag Mobile App:
Keep Working Beyond the Signal

After: Built for the Field,
Not the Office

Reason: Use the supplied field-first tagline where offline capture is explained.

33. Institutional support - Heading
index.html (line 616)

Before: Supported and Funded By Industry Leaders

After: Research & Community Support

Reason: Avoid implying that every logo represents funding, endorsement, or independent product validation.

34. Onboarding - Intro
index.html (line 675)

Before: Get organized, reportable farm records without a dedicated data team or a second job. Start in three simple steps.

After: Get time back without adding a second job. Use the notes and photos you already keep, then review and confirm your records in three simple steps.

Reason: Lead with time savings and make the review step part of the workflow.

35. Onboarding - Capture step title
index.html (line 456)

Before: Speak and Snap

After: Say It, Snap It

Reason: Use the approved plain-language capture phrase.

36. Onboarding - Capture step description
index.html (line 711)

Before: Say what happened to create a dated task, or photograph a handwritten log to make a searchable table. Review before saving.

After: Say what happened or photograph a paper log. AI helps structure the entry; you review and confirm before saving.

Reason: Describe AI-assisted capture without implying hands-off final records.

37. Onboarding - Report step title
index.html (line 723)

Before: Be Ready to Report

After: Review, Confirm, Report

Reason: Make the human review step visible.

38. Onboarding - Report step description
index.html (line 724)

Before: Your reviewed records come together in an audit-ready report for your NOP certification review, without the last-minute reconstruction.

After: Choose your field records and a NOP template, generate a report, then review and confirm the details for your certification review.

Reason: Reflect the documented, user-initiated report workflow.

39. Everyday challenges - Record fragmentation description
index.html (line 764)

Before: Bring paper logs, spray records, and equipment data together by farm, field, plot, and subplot. Keep the way you already organize your work.

After: Keep paper logs, photos, and field notes together by farm, field, plot, and subplot, using the names and boundaries you already know.

Reason: Avoid implying equipment integrations.

40. Everyday challenges - Field context description
index.html (line 777)

Before: Say why a job changed or an application was delayed. SPIDER Ag turns your field notes into a structured, dated task for your review.

After: Say why a job changed or an application was delayed. Turn that field note into a dated task, then review and confirm the details.

Reason: Use the approved review-and-confirm phrasing.

41. Everyday challenges - Offline description
index.html (line 790)

Before: Capture voice notes and photos beyond cell coverage. Records stay saved and sync when you reconnect, so details never have to wait for the office.

After: Record voice notes and take photos without cell service. The mobile app saves them offline and syncs when you reconnect.

Reason: Describe limited offline capture without an absolute never claim.

42. Benefits - Heading
index.html (line 804)

Before: Farm Records That Work the Way You Do

After: Built Around How You Organize Your Farm

Reason: Use the approved farmer-native organization language.

43. Benefits - Audience fit lead
index.html (line 805)

Before: Built and priced for small and mid-sized row crop operations, with the organized records larger farms rely on. Your practices fit right in.

After: Sized and priced for small and mid-sized row crop farms. Get organized records without a dedicated data team or another job on top of farming.

Reason: Prioritize fit and low added workload for the row-crop audience.

44. Benefits - Audit card description
index.html (line 818)

Before: Your dated field records are already assembled into an audit-ready report when your NOP certification review comes around.

After: Use dated field records and NOP templates to prepare an audit-ready report. Review and confirm it before your certification review.

Reason: Remove the implication that reports assemble themselves.

45. Benefits - Organization card badge
index.html (line 824)

Before: card-badge value-badge">Connected Records

After: card-badge value-badge">Your Farm Structure

Reason: Remove integration implications from the card label.

46. Benefits - Organization card title
index.html (line 825)

Before: Keep Your Systems Connected

After: Farmer-Native Organization

Reason: Use the supplied organization tagline, explained in plain language below.

47. Benefits - Organization card description
index.html (line 831)

Before: Bring equipment data from Operations Center and AgFiniti together with spray logs and financial records, keeping the tools you already use.

After: Keep records by farm, field, plot, and subplot, using your own names and boundaries. Build around how you already organize your land.

Reason: Remove named integrations that are not confirmed in the reviewed product documentation.

48. Benefits - AI card title
index.html (line 838)

Before: Voice Notes & Paper Logs

After: Trustworthy AI, Not Blind AI

Reason: Use the supplied trust tagline in a body section.

49. Benefits - AI card description
index.html (line 844)

Before: Turn voice notes into dated tasks and handwritten logs into searchable tables. Review every AI-generated entry before it is final.

After: AI helps structure voice notes and photos. Review and confirm the details before saving; you remain the final word on your farm records.

Reason: Make trust a concrete review-and-correct process rather than an accuracy guarantee.

50. Benefits - Time card badge
index.html (line 850)

Before: card-badge value-badge">Field Conditions

After: card-badge value-badge">Time Back

Reason: Use the highest-priority audience benefit.

51. Benefits - Time card title
index.html (line 851)

Before: Know Your Field Conditions

After: Less Time on Paperwork

Reason: Replace an unverified sensor-led benefit with documented record-keeping value.

52. Benefits - Time card description
index.html (line 857)

Before: Keep soil moisture and local weather readings alongside field observations for a clearer record of the conditions on your land.

After: Find dated tasks, receipts, and field notes in one place instead of retyping logs or rebuilding the story before a review.

Reason: Prioritize time back without quantified savings.

53. FAQ - File capture answer
index.html (line 955)

Before: You can upload PDF and Word documents, photos, and voice notes. Say what happened in the field to create a structured, dated task, or snap a photo of a handwritten log to create a searchable table. Review the extracted details without retyping the original.

After: Upload PDF and Word documents, photos, and voice notes. Say what happened to draft a dated task, or photograph a handwritten log to extract a searchable table. Review, correct, and confirm the details before saving.

Reason: Qualify generated entries as drafts that need review.

54. FAQ - NOP answer
index.html (line 966)

Before: SPIDER Ag assembles your reviewed, dated records into an audit-ready report using ready-made National Organic Program (NOP) forms. Records stay linked to your farm, field, plot, or subplot, so the information is already organized when your certification review comes around.

After: Choose up to five files linked to a land area, select a National Organic Program (NOP) template, and generate your report. Review, correct, and confirm the details before saving. Audit-ready records support your review; the certification decision remains with your certifier.

Reason: Reflect the documented five-file workflow and distinguish audit preparation from guaranteed certification.

55. FAQ - Subscription question
index.html (line 972)

Before: Does SPIDER Ag require a long-term commitment?

After: How do the trial and cancellation work?

Reason: Replace an open-ended commitment claim with an explanation of actual conditions.

56. FAQ - Subscription answer
index.html (line 977)

Before: No, SPIDER Ag offers a flexible 14-day free trial with absolutely zero commitment and no credit card required. After the trial, you can choose between our monthly or annual subscription plans and cancel at any time.

After: Start with a 14-day free trial, with no credit card required. A paid subscription is needed to keep access after the trial. If you cancel, access continues through the current billing period. Download files and reports you need before it ends.

Reason: State trial and cancellation access limitations from the manual.

57. FAQ - AI review answer
index.html (line 988)

Before: Yes. SPIDER Ag checks its AI-generated entries with you at every step, and each entry is reviewed before it is final. You can correct a transcription, add missing details, or regenerate a report before confirming and saving. You remain the final word on your yield, input, and farm records.

After: Yes. AI helps draft tasks, extract information, and fill report templates. You review the output, correct errors or missing details, then confirm and save. That includes voice transcriptions, scanned logs, and generated reports. You remain the final word on your records.

Reason: Do not imply AI verifies its own correctness or that a human review is performed automatically.

58. Trial call to action - Description
index.html (line 1004)

Before: Try SPIDER Ag free for 14 days and turn the notes you already keep into records you can use. Enter your email to start your farm profile or subscribe to our updates.

After: Try SPIDER Ag free for 14 days and keep the records the way you already work. Choose a plan to continue to signup.

Reason: Match the call to action to the existing pricing and signup flow rather than implying an email signup that does not exist.

spider-ag.html

59. Search metadata - Description
spider-ag.html (line 8)

Before: Turn voice notes into dated tasks and handwritten logs into searchable tables. SPIDER Ag keeps farm records your way, reviewed by you and ready for NOP audits.

After: Keep farm records the way you already work. Capture voice notes and photos, review and confirm AI-generated entries, and prepare audit-ready NOP reports.

Reason: Reinforce existing habits, human review, and audit preparation.

60. Hero - Eyebrow
spider-ag.html (line 87)

Before: Proprietary Software

After: Farm Record-Keeping

Reason: Replace an ownership label with a plain product description.

61. Hero - Supporting description
spider-ag.html (line 89)

Before: SPIDER Ag is a secure, innovative, two-sided platform that links organic and traditional farmers with key members of their supply chain, such as certifiers and regulators. It transforms farming into a seamless, intelligent, and profitable experience.

After: SPIDER Ag helps turn voice notes, photos, and paper logs into farm records you can review, find, and use in reports. Keep the way you already work, with less time spent retyping.

Reason: Remove dense platform language, unverified supply-chain account capabilities, and implied profitability guarantees; keep the hero heading.

62. Core record view - Heading
spider-ag.html (line 127)

Before: One Farm Record, Your Way

After: One Place for Every Farm Record

Reason: Use the approved one-place phrase in an existing card.

63. Core record view - Description
spider-ag.html (line 128)

Before: Keep one farm record the way you already work, trusted by the people who need to see it. Your fields, tasks, and certification records come together in one view.

After: Keep voice notes, photos, paper logs, and dated tasks together, organized around your land. Find what happened, when, and where without retyping the whole record.

Reason: Describe concrete traceability and time-saving benefits.

64. Capture features - Voice title
spider-ag.html (line 151)

Before: Voice Notes to Dated Tasks

After: Say It: Voice Notes to Tasks

Reason: Use a plain low-friction capture instruction.

65. Capture features - Voice description
spider-ag.html (line 152)

Before: Say what happened in the field. SPIDER Ag turns it into a structured, dated task for you to review and confirm before it is final.

After: Say what happened in the field. AI helps turn your voice note into a dated task; review and confirm the details before saving.

Reason: Put the action first and make the AI and review roles explicit.

66. Capture features - Photo title
spider-ag.html (line 169)

Before: Paper Logs to Searchable Tables

After: Snap It: Paper Logs to Tables

Reason: Pair the photo workflow with the voice workflow.

67. Capture features - Photo description
spider-ag.html (line 170)

Before: Photograph a handwritten log or receipt to create a searchable table. Review the extracted details without retyping or digging through a shoebox later.

After: Photograph a handwritten log or receipt. AI extracts the details into a searchable table for you to review, correct, and confirm without retyping.

Reason: Explain AI-assisted capture and human correction without leading the headline with AI.

68. Capture features - Organization title
spider-ag.html (line 185)

Before: Your Land, Your Organization

After: Farmer-Native Organization

Reason: Use the supplied organization tagline where the land hierarchy is explained.

69. Capture features - Organization description
spider-ag.html (line 186)

Before: Records follow your farm, fields, plots, and subplots, so you never have to reorganize your land to fit the software.

After: Use your own farm, field, plot, and subplot names and boundaries. Set up that structure before adding records, so it fits how your farm already runs.

Reason: Avoid an absolute never claim and respect the manual warning about changing the hierarchy later.

70. Capture features - Offline title
spider-ag.html (line 205)

Before: Keep Working Offline

After: Works in the Field, Even Offline

Reason: Use the approved offline-first phrase.

71. Mobile app - Heading
spider-ag.html (line 235)

Before: SPIDER Ag Mobile:
Capture It While You Work

After: Built for the Field,
Not the Office

Reason: Use the supplied field-first tagline consistently across pages.

72. Mobile app - Description
spider-ag.html (line 237)

Before: Keep voice notes, photos, and paper logs part of your day. Capture them from the cab or field, even offline, and turn them into usable records without adding a second job.

After: Record voice notes and take photos in the field, even offline. When you reconnect, sync your captures and review the AI-generated details before confirming and saving.

Reason: Limit offline claims to documented capture and make review explicit.

73. Interface tour - Eyebrow
spider-ag.html (line 288)

Before: Interface Tour

After: Less Time on Paperwork

Reason: Lead with the highest-priority benefit.

74. Interface tour - Intro
spider-ag.html (line 290)

Before: From a field observation to an audit-ready report, keep a clear record of what happened, when, and where.

After: Say it, snap it, it's recorded. AI helps structure your notes and photos; you review and confirm before saving.

Reason: State the low-friction capture promise and its review condition together.

75. Interface tour - Task title
spider-ag.html (line 333)

Before: Task Calendar & Compliance Audit Schedules

After: Dated Tasks & Audit Preparation

Reason: Use preparation language instead of suggesting guaranteed compliance.

76. Interface tour - Task image description
spider-ag.html (line 330)

Before: alt="Task Calendar & Compliance Interface"

After: alt="SPIDER Ag task calendar and dated field activities"

Reason: Keep accessibility copy aligned with visible copy.

77. Interface tour - Report title
spider-ag.html (line 344)

Before: Office Desk Analytics & Report Generator

After: Field Records & Report Preparation

Reason: Remove unverified analytics breadth and reinforce the preparation workflow.

78. Interface tour - Report description
spider-ag.html (line 345)

Before: Bring reviewed field records together in reports that certifiers and others who need them can trust.

After: Select field records and a NOP template, generate a report, then review and confirm the details for your certification review.

Reason: Explain the report workflow instead of implying externally validated acceptance.

79. Final call to action - Eyebrow
spider-ag.html (line 333)

Before: Take Control Of Your Data

After: Audit Preparation

Reason: Use a focused, plain-language description.

80. Final call to action - Heading
spider-ag.html (line 359)

Before: Be Ready When Your Review Comes Around

After: Audit-Ready Records, Reviewed by You

Reason: Combine audit preparation and human review without a compliance guarantee.

81. Final call to action - Description
spider-ag.html (line 360)

Before: Your records are already assembled into an audit-ready report for your NOP certification review. Every AI-generated entry is reviewed by you before it is final, so you remain the final word on your yield and input data.

After: Create a NOP report from selected field records, then review, correct, and confirm the details. You remain the final word on the entries and reports you save. Your certifier makes the certification decision.

Reason: Remove passive automation and separate software assistance from the certification outcome.

82. Final call to action - Trial note
spider-ag.html (line 373)

Before: 14-Day Free Trial · Instant Setup · Cancel Anytime

After: 14-Day Free Trial · No Credit Card Required

Reason: Avoid unsupported setup timing and unqualified cancellation language.

83. Final call to action - Plan selection button
spider-ag.html (line 364)

Before: Create Free Account & Join

After: Choose a Plan & Start Trial

Reason: Describe the next step accurately: the button opens plan selection, rather than immediately creating a permanently free account.

pricing-sign-up.html

84. Search metadata - Description
pricing-sign-up.html (line 10)

Before: Choose your SPIDER Ag plan. Secure, compliance-ready ag-tech data platform for farmers.

After: SPIDER Ag plans for farm records, voice and photo capture, and audit preparation. Start a 14-day trial and review the monthly and annual billing options.

Reason: Replace security and compliance overstatements with concrete plan benefits.

85. Plan introduction - Description
pricing-sign-up.html (line 88)

Before: Select the plan that fits your farm. No credit card required for trial, cancel at any time.

After: Select the plan that fits your farm. No credit card required to start your 14-day trial. A paid plan is needed to keep access after the trial.

Reason: Disclose continued-access conditions without adding new marketing taglines to the hero.

86. Plan card - Eyebrow
pricing-sign-up.html (line 100)

Before: Ag-Tech Standard

After: Fits Your Farm

Reason: Emphasize operation fit instead of a vague technology label.

87. Plan card - Annual billing explanation (static and toggle) (2 occurrences)
pricing-sign-up.html (line 110)

Before: Billed annually. Most popular among established farmers.

After: Billed annually: $250, versus $480 for 12 monthly payments.

Reason: Give a visible basis for the existing $230 and rounded 48% price savings; remove unsupported popularity.

88. Plan card - Monthly billing explanation
pricing-sign-up.html (line 252)

Before: Billed monthly. Perfect for flexible operational needs.

After: Billed monthly at $40. Twelve payments total $480.

Reason: Make the annual comparison auditable from the displayed prices.

89. Plan features - Capture
pricing-sign-up.html (line 133)

Before: Record from the field or tractor (photos, voice notes, invoices)

After: Voice notes, photos, and paper logs with less retyping

Reason: Lead with capture and time saved.

90. Plan features - Offline
pricing-sign-up.html (line 140)

Before: Offline Database with automated sync when connected

After: Voice and photo capture offline; sync when connected

Reason: Describe the documented limited offline workflow.

91. Plan features - Organization
pricing-sign-up.html (line 147)

Before: Pre-loaded and custom regulatory compliance forms

After: Records organized by farm, field, plot, and subplot

Reason: Add operation fit using the existing feature row.

92. Plan features - Audit preparation
pricing-sign-up.html (line 154)

Before: Automated time-stamps for trace-backs (Audit-Ready)

After: Dated records and NOP templates for audit preparation

Reason: State traceability and reporting without claiming automation guarantees.

93. Plan features - AI review
pricing-sign-up.html (line 161)

Before: 100% Private & Secure data cloud backup

After: Review and confirm AI-generated entries before saving

Reason: Remove absolute security claims and show the review step.

schedule-demo.html

94. Contact form - Description
schedule-demo.html (line 445)

Before: Fill in your details below and our team will get in touch with you shortly.

After: Tell us how you keep farm records today. We can help you explore voice and photo capture, farm organization, and audit preparation.

Reason: Use the existing form introduction to invite a workflow-fit conversation.

main.js

95. Shared contact modal - Description
main.js (line 901)

Before: Send us a message and our team will get in touch with you shortly.

After: Tell us how you keep farm records today. Ask about voice and photo capture, organizing your farm, or preparing for an audit.

Reason: Keep the contact conversation aligned with the approved benefits.

96. Interactive farm map - Field category
main.js (line 687)

Before: step: 'Field Net Profitability'

After: step: 'Field Records'

Reason: Remove a profitability-calculation implication.

97. Interactive farm map - Field title
main.js (line 688)

Before: title: 'Know What Each Field Truly Earns'

After: title: 'Trace Records Back to Each Field'

Reason: Match the updated default card and desktop pin.

98. Interactive farm map - Field description
main.js (line 689)

Before: Keep crop performance, inputs, labor, and financial records linked to each field, so you can trace costs and understand what it earns.

After: Keep dated tasks, input records, and receipts linked to the field they belong to, so you can find the record behind each activity.

Reason: Use concrete traceability.

99. Interactive farm map - Organization category
main.js (line 694)

Before: step: 'Connected Systems'

After: step: 'Farm Organization'

Reason: Replace technical integration framing.

100. Interactive farm map - Organization title
main.js (line 695)

Before: title: 'Connect Your Farm Systems'

After: title: 'Built Around Your Farm'

Reason: Explain farmer-native organization.

101. Interactive farm map - Organization description
main.js (line 696)

Before: Bring equipment data, spray logs, and financial records together around your farm, fields, plots, and subplots, keeping the tools you already use.

After: Organize notes, photos, and paper logs by farm, field, plot, and subplot, using the names and boundaries you already know.

Reason: Avoid unverified direct equipment connections.

102. Interactive farm map - Field diary description
main.js (line 703)

Before: Say what happened in the field and turn it into a structured, dated task. Review the entry before it is final and keep the context behind the numbers.

After: Say what happened in the field and turn it into a dated task. Review and confirm the details, keeping the context behind the record.

Reason: Use the approved review-and-confirm step.

103. Interactive farm map - Observation category
main.js (line 708)

Before: step: 'Real Field Conditions'

After: step: 'Field Observations'

Reason: Describe observation capture instead of sensor deployment.

104. Interactive farm map - Observation title
main.js (line 709)

Before: title: 'Measure Real Field Conditions'

After: title: 'Record What You See in the Field'

Reason: Align the title with documented capture features.

105. Interactive farm map - Observation description
main.js (line 710)

Before: Keep local weather and soil sensor readings alongside your field observations, so each record reflects the conditions on your land.

After: Record field conditions in a voice note or photo, even offline. Sync when connected, then review and confirm the captured details.

Reason: Remove implied sensor and weather-station integration.

106. Interactive farm map - Report category
main.js (line 715)

Before: step: 'Decision Intelligence'

After: step: 'Audit Preparation'

Reason: Use a concrete benefit instead of technical abstraction.

107. Interactive farm map - Report title
main.js (line 716)

Before: title: 'Make Better Decisions Faster'

After: title: 'Prepare Audit-Ready Records'

Reason: Use the approved audit-ready focus.

108. Interactive farm map - Report description
main.js (line 717)

Before: Use one organized farm record for clearer decisions and audit-ready reports, without hunting for receipts or rebuilding the story before a review.

After: Find records linked to your land, select a NOP template, and generate a report. Review and confirm the details before your certification review.

Reason: Show the actual report preparation process.

Appendix B - Functional, layout, and maintenance changes

Trial call to action - Pricing/signup link replaces nonfunctional email form

File: index.html (line 1006)

The old form collected an email and showed an invite-sent message without a backend. A direct link to the existing plan selection page makes the action truthful.

Before:

```
          <form class="newsletter-form" id="newsletter-email-form">
            <input type="email" class="newsletter-input" id="newsletter-email-input" placeholder="Enter
your email address" required aria-label="Email address for subscription">
            <button type="submit" class="btn btn-primary">
              Get Started Free
              <span class="btn-icon-wrapper">
                <svg viewBox="0 0 24 24">
                  <line x1="7" y1="17" x2="17" y2="7" />
                  <polyline points="7 7 17 7 17 17" />
                </svg>
              </span>
            </button>
          </form>

          <div class="newsletter-toast" id="newsletter-success-toast">
              Welcome! Your 14-day free trial invite is on its way to your inbox.
          </div>
```

After:

```
          <a href="pricing-sign-up.html" class="btn btn-primary">
            Choose Your Plan
            <span class="btn-icon-wrapper">
              <svg viewBox="0 0 24 24">
                <line x1="7" y1="17" x2="17" y2="7" />
                <polyline points="7 7 17 7 17 17" />
              </svg>
            </span>
          </a>
```

Trial call to action - Remove local-only email success handler

File: main.js

Remove the code that displayed an invitation confirmation without sending an invitation. No real signup or backend handler was removed.

Before:

```
  /* ---- Newsletter Form Handler ---- */
  const nlForm  = document.getElementById('newsletter-email-form');
  const nlToast = document.getElementById('newsletter-success-toast');

  if (nlForm && nlToast) {
    nlForm.addEventListener('submit', (e) => {
      e.preventDefault();
      nlToast.style.display = 'block';
      nlForm.reset();
      setTimeout(() => { nlToast.style.display = 'none'; }, 6000);
    });
  }
```

After:

The local-only success handler was removed. The replacement CTA is a normal link to pricing-sign-up.html.

Source maintenance - Trial section comment

File: index.html (line 997)

Match the source comment to the corrected trial CTA.

Before:

```
NEWSLETTER CAPTURE
```

After:

```
FREE TRIAL CALL TO ACTION
```

Source maintenance - Utilities comment

File: main.js (line 3)

Remove the reference to the deleted local-only newsletter handler.

Before:

```
Hamburger navigation, scroll reveal animations, newsletter form
```

After:

```
Hamburger navigation, scroll reveal animations, contact modal
```

Pricing mobile layout - Responsive pricing width and compact toggle

File: style.css (line 1718)

The pre-existing max-content toggle forced the pricing container wider than a phone. Constrain the container, reduce mobile card padding, and compact the labels and savings badge while preserving both billing options.

Before:

```
No pricing-specific container minimum-width override or compact mobile billing-toggle rules.
```

After:

```
.pricing-hero > .container {
  width: 100%;
  min-width: 0;
}

@media (max-width: 640px) {
  .pricing-hero .card-core {
    min-width: 0;
    padding: 1.5rem 1rem !important;
  }

  .pricing-hero .pricing-toggle-container {
    width: 100% !important;
    max-width: 100%;
    gap: 0.25rem;
  }

  .pricing-hero .toggle-label {
    flex-direction: column;
    gap: 0.15rem;
    padding: 0.35rem 0.45rem !important;
    font-size: 0.8rem;
  }

  .pricing-hero .switch {
    flex: 0 0 52px;
    margin: 0 0.25rem !important;
  }

  .pricing-hero .toggle-label .save-badge {
    padding: 0.2rem 0.35rem;
    font-size: 0.625rem;
  }
}
```
